Education

Florida International University — Miami, FL
Bachelor of Arts in Computer Science — *Aug. 2022 – Aug. 2026*

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Software Testing, Computer Architecture, Database Management (SQL), Machine Learning, Java Programming, Systems Programming (C/Python)

Experience

Systems Engineer — Oct. 2025 – Present
The Campbell Law Group (tclgfirm.com) — *Miami, FL*

- Rebuilt the firm's public marketing site as a modular React 19 + TypeScript single-page application, replacing the legacy WordPress deployment, and collaborated with another engineer through a peer-reviewed Git/GitHub pull-request workflow to ship features to production
- Architected a type-safe, centralized content layer that decoupled page copy from presentation, and added automated regression test coverage with Vitest while remediating ADA/accessibility issues
- Grew the firm's organic lead volume by optimizing key on-page SEO markers—meta titles, descriptions, and structured content—to improve search-ranking placement across every practice-area page
- Tracked user engagement and retention using Google Analytics, surfacing traffic and behavior trends (bounce rate, session duration, repeat visits) to guide content and UX decisions
- Planned and managed Google Ads campaigns and broader digital-marketing initiatives to drive qualified traffic to the firm's practice-area pages
- Administered firm IT infrastructure, including a Synology NAS for internal file storage and backups, Microsoft 365 Outlook and SharePoint administration, and day-to-day technical support for staff

Projects

IPFranked | *Python, FastAPI, DuckDB, SQL* — 2026

- Built a full-stack powerlifting analytics platform that ingests OpenIPF competition data into a DuckDB warehouse and serves ranked, per-weight-class leaderboards and individual lifter career dashboards via a FastAPI backend
- Designed a custom ranking algorithm that scores each lifter's best qualifying total within a rolling two-year window, computed independently per weight class, and infers missing weight classes from recorded bodyweight
- Built an automated scraper to track championship entry nominations, with response caching, rate-limiting, and fuzzy name-matching to cross-reference nominees against the ranked database ahead of upcoming meets
- Wrote an automated data-validation script to catch ranking and pipeline bugs, and a generator that produces branded social-media graphics from the ranking data

Technical Skills

Languages: Java, Python, C, TypeScript, JavaScript, SQL, HTML/CSS

Frameworks & Libraries: React, React Router, FastAPI, Tailwind CSS, Framer Motion, i18next, Vite, Vitest, React Testing Library

Developer Tools: Git/GitHub, Vercel, DuckDB, ESLint, Linux, VS Code

Core Concepts: RESTful API Design, Data Engineering/ETL Pipelines, Web Scraping, Automated/Regression Testing, Responsive Web Design, Accessibility (ADA/WCAG), CI/CD

Marketing & Analytics: SEO Optimization, Google Analytics, Google Ads, Digital Marketing Campaigns

IT & Platforms: Microsoft 365 (Outlook, SharePoint), Synology NAS, IT Support

Leadership

Competing Athlete — 2022 – 2026
FIU Powerlifting Team — *Miami, FL*

- Competed for four years as a member of Florida International University's powerlifting team, balancing a competitive athletics schedule with a full-time Computer Science course load

Member — 2022 – 2026
Init — FIU Computer Science Club — *Miami, FL*

- Participated in FIU's student-run Computer Science organization, engaging with peers on technical topics and campus coding events
